

Web Scrapping

Data Collection (Web Scrapping)

Collect data from a website (such as product data, job listings, or reviews) containing approximately 500 rows and 7 columns, using the BeautifulSoup library in Python.

When selecting the website, you must register your name, the website URL, and the website name in the online form via the following link:

<https://docs.google.com/forms/d/e/1FAIpQLSeGQpg-uuQWXoV1A8SoFWKHTz1pQBS3kcNPtaDQMSYWFYtNTw/viewform?usp=dialog>

Make sure that the website name or URL is not duplicated with any other student by checking the selected websites list at the following link:

<https://docs.google.com/spreadsheets/d/1jbO4TpKM0NkA0k-Y5NNtk4fZ8j78ksJJqYkahJPtWTk/edit?usp=sharing>

Evaluation will be based on:

- Each student must submit the activity files with extensions (.ipynb) and .csv.
- Each student will participate in recording an explanation of the activity, which will account for 60% of the activity grade.
- Any submission using AI tools such as ChatGPT or similar will receive a zero grade.

Good Luck
